Why Faux Wood Beams?

Our Woodland Supply faux wood beams offer a stunning solution that combines the beauty of traditional wood with the convenience of modern innovation. Faux wood beams use real wood on the outside and have a hollow center making them more cost effective and easier to install than solid wood while keeping their authentic wood aesthetic. The real wood exterior is available in both smooth and rough surface textures, and the hollow core can hide electrical wires or plumbing and clad existing structures.

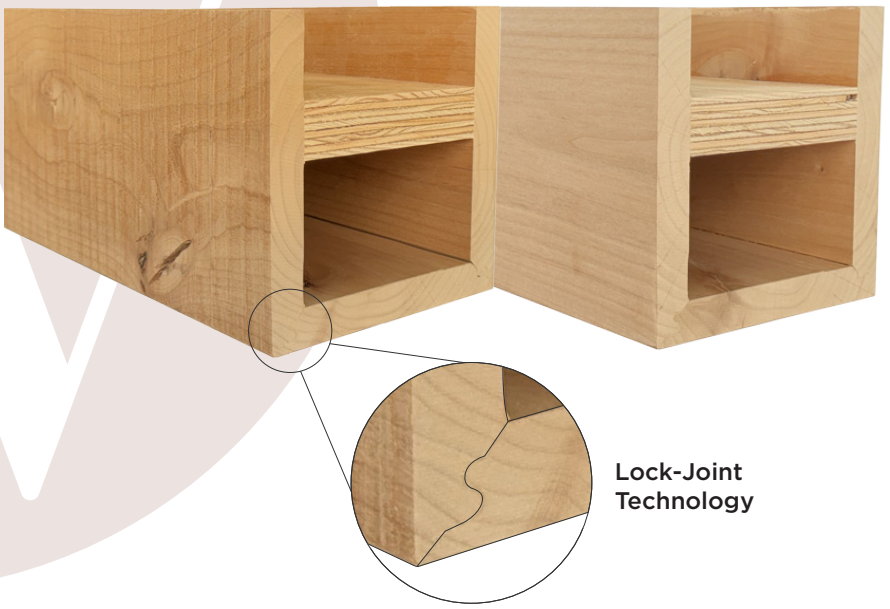
Options:

- Available in 4” to 12” beam sizes up to 16’ long
- Rough sawn or smooth face textures
- Assembled in 2, 3, and 4 sided configuration options or available as individual pieces to assemble on-site
- Available in a variety of wood specie options (shown below). Our most popular species for beams are white oak, red oak, knotty alder, and poplar

Feautures & Advantages:

- Lock-joint technology that creates a seamless mitered corner
- Multi-piece construction provides strength and stability against warping and twisting
- Lightweight (70% less wood than solid beams!)
- Easy installation process that most DIY can tackle

Rough Sawn Face Texture **Smooth Face Texture**



Lock-Joint Technology
